Experience

Data Scientist – Acceptable Use Policy, Wise – Budapest, HU Jul 2026 – Present

- **End-to-end ML for AUP:** Building two ML systems: one to detect transfers involving crypto platforms and another to assess business activity on personal accounts, spanning problem framing, data and labels, modelling, evaluation, and production integration.
- **Reproducible model lifecycle:** Using MLflow and AWS SageMaker for experiment tracking, model versioning, and managed deployment workflows across both systems.

Product Analyst / Data Scientist – KYC & AML, Wise – Budapest, HU Oct 2024 – Jun 2026

- **Production ML for KYC:** Designed, trained, and deployed a real-time multi-signal model to global shadow mode, achieving **4x recall and 3x precision** relative to the rule-based baseline through staged validation.
- **Experimentation & causal inference:** Designed power-analyzed A/B tests and phased rollouts for KYC controls; one experiment delivered a **27% reduction in financial crime** with positive business impact.
- **Decision-making under uncertainty:** Led clustering and explainability analysis across 17k+ high-risk profiles, showing that targeted-review routing would not be effective and preventing investment in a low-value control.
- **Reusable data systems:** Co-designed an assurance pipeline covering 7 global KYC controls and built anomaly-alerting infrastructure reused by other teams.
- **Applied LLM systems:** Developed an LLM application to automate Wise's highest-cost control review, with reusable observability and metric infrastructure built in partnership with Product and Engineering teams.

Product Analyst Intern, Wise – Budapest, HU Jun 2023 – Sep 2023

- Built customer segmentation model analyzing transaction patterns and loyalty metrics; identified high-value segments for targeted campaigns.

Quantitative Developer Intern – FX, Citi – Budapest, HU Jun 2022 – Mar 2023

- Automated OPA report and Model Analysis Framework generation using Python; built grid management system with worker scheduling, eliminating 40 hours/month of manual work.

Publication

Data Augmentation for Pseudo-Time Series Using GANs – ITAT 2023, Slovakia Sep 2023

- First author. Designed LSTM-GAN architecture (128-cell LSTM, adversarial training, Gaussian post-processing) for synthetic time series generation; validated using silhouette score, MSE, RMSE.

Education

Eötvös Loránd University, MSc in Computer Science and Data Science – Budapest, HU Sep 2021 – Jun 2024

- Stipendium Hungaricum Excellence Scholarship. Coursework: ML, Deep Learning, AI, Numerical Optimization.

Ibn Tofail University, BSc Computer Science & Mathematics – Kenitra, Morocco Sep 2017 – Jun 2021

- Graduated with Distinction.

Selected Achievements

Co-founded an award-winning accessibility startup at Startup Weekend Tangier; won first place at the AGRI-FIN FinTech Hackathon.

Technical Skills

Statistics & ML: A/B Testing, Power Analysis, Causal Inference, Hypothesis Testing, Metric Design, Logistic Regression, Clustering (KMeans, HDBSCAN), GANs, LSTM, Feature Engineering

MLOps & Production: MLflow, AWS SageMaker, Experiment Tracking, Model Versioning, Deployment Workflows

LLM/NLP: RAG Pipelines, LLM Gateway, Embeddings, Vector DB

Data & Tools: Python (Pandas, NumPy, Scikit-learn), SQL, dbt, Airflow, Git

Languages

Fluent: Arabic (Native), English (C1), French (C1) **Intermediate:** German (B1 Goethe Institute)
